

AFA a-ok with new robot palletizing system

New from AFA Systems comes a palletizing system that is very compact.

BY CANADIAN PACKAGING STAFF ON MAY 27, 2013 1:47PM

The **AF-PLT** gantry robot palletizing system from **AFA Systems Ltd.** is an economical solution to automate the pallet building process.

Headquartered in Brampton, Ont., AFA Systems is a provider of custom-designed automation solutions, and has designed its *AF-PLT system* to utilize a three-axis robot to pick and place a wide variety of products such as cases, pails, and more.

The three-axis robot ensures easier set up and maintenance compared to more sophisticated robots on the marketplace.

This compact palletizer can include optional features such as slip sheet inserters, pallet dispensers, and washdown construction.

As well, operators can easily program and changeover pack patterns quickly on the palletizer's HMI (human-machine interface).

In addition, the *AF-PLT's* modular design allows the machine to be easily integrated into a production line.

It uses **Rockwell Automation's** superb **Allen Bradley** controls and servo motors as standard equipment on the *AF-PLT*.
